

KODEK

Kodekaromas Technologies Private Limited

30-Day Business & Brand-Building Plan

From Startup to First Paying Client

Prepared for: Soumya Darshan Pattanaik

Company: Kodek / Kodekaromas Technologies Pvt. Ltd.

Website: <https://kodek.in>

Date: April 30, 2026

This document is a comprehensive, actionable plan designed to help Kodek establish its brand, launch services, build a portfolio, and land its first paying client within 30 days — with near-zero operating cost.

Table of Contents

Executive Summary

Kodek (Kodekaromas Technologies Private Limited) is an AI and technology research company that builds intelligent software, immersive simulations, AR/VR experiences, and games. The company operates across five technology verticals — AI research, software simulations, AR/VR, game development, and applied architecture technology — with the goal of pushing the boundaries of what software can see, simulate, and experience.

Architecture and builders is one important application domain within this broader mission — not the whole company. Builders Copilot and AI Room Restyler are early products in that vertical and serve as proof of Kodek's ability to take complex AI and 3D technology and make it commercially useful.

This plan is built for a solo founder targeting the first paying client within 30 days. The strategy: use the architecture/real estate vertical as the fastest path to early revenue, while building the broader research and technology identity in parallel. You do not need to spend more than Rs. 2,000–Rs. 5,000/month to execute this plan.

The 3-Part Strategy

- **POSITION:** Establish Kodek as an AI and technology research company — broad enough to attract diverse clients and research collaborations, focused enough to be credible.
- **PROVE:** Build 3–5 portfolio pieces across your verticals that demonstrate depth: an AI simulation, an AR/VR experience, a game prototype, and an architecture AI tool.
- **PITCH:** Use the architecture/PropTech vertical as your fastest revenue path on Upwork and LinkedIn while the broader brand builds momentum.

Key Insight from Website Audit

Your current website (kodek.in) tags the company as AR/VR and gaming but shows only an ArchViz demo and one product promo. The brand has not caught up with the company's actual scope. This plan fixes that — the new positioning reflects the full range of what Kodek is and can do.

Section 1 — Brand Positioning

Most technology companies make one of two mistakes: they are so broad that no one understands what they do, or so narrow that they can never grow beyond a single niche. Kodek's positioning must be precise enough to be credible and wide enough to reflect your actual ambition. This section defines that positioning.

1.1 The Core Identity: AI & Technology Research Company

Kodek is not a software agency. It is not an AR/VR studio. It is not a game development house. It is all of these — unified by a single research-oriented identity: an AI and technology company that uses artificial intelligence, simulation, and immersive computing to solve real problems.

This framing does three important things:

1. **It elevates the brand:** "AI & technology research" signals intellectual depth and long-term ambition. Clients and collaborators treat you differently when you are a research company, not just a dev shop.
2. **It makes every vertical coherent:** AI software, simulations, AR/VR, games, and architecture tools are all expressions of the same core capability — building intelligent, interactive, and immersive systems.
3. **It allows Kodek to grow:** As new verticals open up (healthcare simulations, defence training, urban planning AI, industrial AR), the brand already has room for them.

1.2 The Five Technology Verticals

Kodek operates across five domains. Each is a legitimate focus area and a client acquisition channel in its own right.

Vertical	What Kodek Builds	Example Products / Services
AI Research & Software	Intelligent agents, LLM-powered tools, automation pipelines, custom AI models	Builders Copilot, custom GPT assistants, AI data workflows
Software Simulations	Physics-based simulations, digital twins, training simulators, process models	Construction site simulators, energy flow models, urban planning tools
AR / VR Experiences	Web-based and headset AR/VR, spatial computing, immersive walkthroughs	AI Room Restyler, AR product configurators, property VR tours
Game Development	Serious games, interactive narratives, game prototypes, game AI systems	Training games, educational simulations, indie game prototypes
Architecture & Built Environment	ArchViz, floor plan tools, AI design assistants, construction tech	Builders Copilot, 3D walkthroughs, AI property tools

1.3 Brand Identity Statements

One-Liner (use on website, LinkedIn, Upwork, email signatures)

"Kodek is an AI and technology research company building intelligent software, immersive simulations, AR/VR experiences, and games."

Extended Tagline (subtitle on website, pitch decks)

"We research, design, and build AI-powered systems — from intelligent software and physics simulations to AR/VR experiences and interactive games. Architecture and construction is one of the worlds we work in. Many more are coming."

One-Paragraph Pitch (About page, Upwork overview, LinkedIn bio)

Kodek (Kodekaromas Technologies) is an AI and technology research company. We build intelligent software, immersive simulations, AR/VR experiences, and interactive games that push the boundaries of what software can do. Our work spans five technology verticals: AI research and automation, software simulations, augmented and virtual reality, game development, and applied technology for architecture and the built environment. Our products — Builders Copilot and AI Room Restyler — are early examples of what we create: technically deep, visually compelling, and commercially useful. We work with startups, product companies, research institutions, real estate developers, and creative studios who want to build something they have never seen before.

Full Website Hero Pitch

Suggested Homepage Hero Copy

HEADLINE: "We Build AI. We Build Simulations. We Build Worlds." SUBHEADLINE: "Kodek is an AI and technology research company. We create intelligent software, immersive AR/VR experiences, physics-based simulations, and interactive games — for industries that demand more from technology." PRIMARY CTA: "See Our Work" SECONDARY CTA: "Start a Project"

1.4 Positioning Statement (Internal Use)

For technology-forward businesses, research institutions, game studios, real estate developers, and product companies — Kodek delivers AI-powered software, simulation systems, AR/VR experiences, and game technology that no traditional agency can build and no enterprise vendor will customise for you.

1.5 Architecture & Builders — Your Strategic First Vertical

While Kodek's identity is broad, architecture and construction is where you have the strongest proof today. Use it as your fastest path to first revenue — not as the definition of what Kodek is.

How to frame this in client conversations

To an architecture client: "We work primarily with companies at the intersection of AI and the built environment. Architecture and construction is a core focus area for us." To a game studio or simulation client: "Architecture is one application domain we work in. Our core is AI simulation and interactive systems — games and training environments are very much in

scope."To a research institution: "We are an applied AI research company. We build and publish systems, not just papers. We are interested in collaborations that produce real, deployable technology."

1.6 What Kodek Stands For

- **Research-grade technical depth:** You build real AI systems, real simulations, real engines — not wrappers or templates.
- **Breadth with coherence:** Five verticals, one underlying competency: intelligent, interactive, immersive systems.
- **Applied, not theoretical:** Every research direction leads to a working product or deployable prototype.
- **Speed without sacrificing quality:** MVPs in days. Production systems in weeks. Always with attention to how it looks, moves, and feels.
- **India-built, globally competitive:** The quality of work is not discounted by geography. Kodek competes with studios anywhere.

Section 2 — Service Offerings & Packages

Kodek's services map directly to its five technology verticals. Each vertical has its own client type, demand pattern, and pricing. As a solo founder in the first 30 days, focus on two or three of the highest-demand services — but list all five verticals on your website to signal the full scope of the company.

2.1 Services Across All Five Verticals

Vertical 1 — AI Research & Software

Service	Who Buys It	Timeline	Starting Price
Custom AI Chatbot / LLM Assistant	SMBs, SaaS platforms, portals	5–10 days	Rs. 30K / \$400
RAG Pipeline / AI Knowledge Base	Enterprises, research orgs, EdTech	7–14 days	Rs. 60K / \$800
AI Automation Workflow	Any business with repetitive manual tasks	3–7 days	Rs. 15K / \$200
Custom AI Web App (MVP)	Startups, product companies	14–30 days	Rs. 75K / \$1,000
AI Integration into Existing Product	Tech companies adding AI features	7–21 days	Rs. 50K / \$650

Vertical 2 — Software Simulations

Service	Who Buys It	Timeline	Starting Price
Physics-Based Web Simulation	EdTech, research labs, training cos.	10–21 days	Rs. 60K / \$800
Digital Twin Prototype	Industrial, construction, smart city	21–45 days	Rs. 1.5L / \$1,800
Process / Workflow Simulator	Operations, manufacturing, logistics	14–21 days	Rs. 80K / \$1,000
Training Simulator (browser-based)	Corporate training, safety, defence	14–30 days	Rs. 1L / \$1,300

Vertical 3 — AR / VR

Service	Who Buys It	Timeline	Starting Price
WebAR Product Experience	Retail, furniture brands, real estate	7–14 days	Rs. 50K / \$650
AR Interior Visualizer (WebAR)	Interior designers, developers	7–14 days	Rs. 60K / \$800
VR Property Walkthrough (WebVR)	Real estate developers, architects	10–21 days	Rs. 75K / \$1,000

Service	Who Buys It	Timeline	Starting Price
360-Degree Immersive Experience	Tourism, events, real estate, training	5–10 days	Rs. 35K / \$450
Meta Quest / XR App Prototype	Enterprise, training, healthcare	21–45 days	Rs. 1.5L / \$1,800

Vertical 4 — Game Development

Service	Who Buys It	Timeline	Starting Price
Serious Game / Training Game Prototype	Corporate, EdTech, defence	14–30 days	Rs. 1L / \$1,300
Browser-Based Mini Game	Marketing, events, engagement campaigns	7–14 days	Rs. 40K / \$500
Game AI / NPC Behaviour System	Indie studios, game companies	10–21 days	Rs. 60K / \$800
Unity / Unreal Game Prototype	Indie developers, studios	21–45 days	Rs. 1.5L / \$1,800

Vertical 5 — Architecture & Built Environment

Service	Who Buys It	Timeline	Starting Price
Architectural Visualization (3D/WebGL)	Architects, developers, builders	7–14 days	Rs. 25K / \$350
Interactive Floor Plan Viewer	Real estate developers	10–21 days	Rs. 40K / \$500
AI Room Restyler (white-label)	Interior designers, furniture brands	7–14 days	Rs. 50K / \$700
Builders Copilot (white-label)	Construction firms, PMCs, builders	14–21 days	Rs. 60K / \$800
AI Property Listing / Marketing Tool	Real estate agents, portals	5–10 days	Rs. 30K / \$400

2.2 Service Packages by Engagement Type

These packages work across all verticals and are easier to sell than individual services:

Package A — Research Spike (Rs. 25,000 / ~\$300)

Best for: Companies that want to explore whether AI, simulation, AR/VR, or games can solve a specific problem before committing to a full build. Includes: 1-week technical research sprint + feasibility assessment + technology recommendation report + a live proof-of-concept prototype (not polished, but working). Deliverables: Written report + prototype demo link + 30-min review call. Timeline: 5–7 business days.

Package B — Interactive Prototype (Rs. 80,000 / ~\$1,000)

Best for: Startups, game studios, research teams needing a working demo — AR experience, simulation, game prototype, or AI tool — to validate or present. Includes: Full-stack development of one interactive prototype (AR/VR/game/simulation/AI app) + deployment + 2 rounds of revisions + usage documentation. Deliverables: Live deployed prototype, source code, documentation. Timeline: 14–21 business days.

Package C — Production-Ready AI or Immersive Product (Rs. 1,50,000 / ~\$1,800)

Best for: Product companies, PropTech platforms, EdTech, enterprise clients needing a production-grade AI app, simulation, or AR/VR experience. Includes: Full-stack development with authentication, admin dashboard, cloud deployment + 60-day post-launch support + integration with client systems. Deliverables: Live deployed product, codebase, documentation, training session. Timeline: 3–5 weeks.

Package D — Full Immersive Technology Suite (Rs. 3,00,000+ / ~\$3,500+)

Best for: Real estate developers, large enterprises, game studios, training companies wanting a complete AI + immersive experience system. Includes: AI software component + AR/VR or simulation experience + custom game or interactive layer + branded deployment + 90-day support. Deliverables: Full integrated system, all source files, deployment, team training. Timeline: 5–8 weeks.

2.3 Pricing Philosophy

- **First 3 projects:** Price 20–25% below target to win reviews and testimonials. Reviews beat margin at this stage.
- **After 3 reviews:** Standard pricing. Never discount more than 15% from that point.
- **Always anchor high:** Lead with Package C. Drop to B if pushed. Never open with your lowest number.
- **Hourly rate context:** Frame your value at Rs. 2,000–Rs. 4,000/hour even on fixed-price work.
- **Retainers:** After delivery, offer Rs. 20,000–50,000/month retainers for ongoing feature additions across any vertical.

Section 3 — Portfolio Strategy

Your portfolio is the single most important conversion tool you have. Clients on Upwork and direct leads from LinkedIn both make their decision based on: (1) can this person actually build what I need? and (2) does their work look professional? Here is how to answer both questions definitively in 30 days.

3.1 Existing Products — How to Present Them

- **Builders Copilot:** Record a 2-minute Loom demo video. Write a one-page case study: Problem → Solution → Tech Stack → Result. Add screenshots on your website. This is your strongest proof of AI capability.
- **AI Room Restyler:** Same as above. Highlight the AI model used, the design choices, and real before/after examples. This directly sells to interior designers and real estate clients. Add a live demo link to every proposal you send.

3.2 10 Portfolio Projects to Build This Month

Each project below can be built in 3–7 days with basic to intermediate web development skills. They are designed to demonstrate specific capabilities and attract specific client types.

#	Project Name	Tech Stack	Target Client	Build Time
1	AI Property Listing Generator	OpenAI API + React	Real estate agents	2–3 days
2	3D Floor Plan Visualizer	Three.js / React Three Fiber	Architects, builders	4–5 days
3	AR Furniture Placer (WebAR)	A-Frame / WebXR + model-viewer	Furniture brands, real estate	3–4 days
4	Construction Progress AI Analyzer	Python + OpenAI Vision API	Construction companies	3–4 days
5	Real Estate Chatbot Demo	LangChain + OpenAI + React	Property portals, agents	2–3 days
6	AI Interior Mood Board Generator	Stable Diffusion / Replicate + React	Interior designers	3–4 days
7	Smart Building Energy Simulator	Python + Streamlit	Green building consultants	3–4 days
8	AI Architect Proposal Generator	OpenAI API + PDF export + React	Architects, design firms	2–3 days
9	3D Product Configurator (Furniture)	Three.js + texture swap	E-commerce, furniture brands	4–5 days
10	Neighborhood VR Walkthrough (Web)	A-Frame + 360 video/images	Real estate developers	2–3 days

3.3 Priority Order for Client Acquisition

Do not try to build all 10. Pick 3–4 based on what you want to sell first. Below is the recommended order:

1. **Priority 1 — Real Estate Chatbot Demo:** Fastest to build, highest Upwork demand. AI chatbot skills are the #1 requested category right now.
2. **Priority 2 — AI Property Listing Generator:** Very quick to build, immediately useful, and shows AI writing skills which transfer to many other Upwork categories.
3. **Priority 3 — 3D Floor Plan Visualizer:** Differentiating and rare on Upwork. Puts you in the ArchViz category with little competition from India.
4. **Priority 4 — AR Furniture Placer:** Takes a bit longer but is extremely impressive in demos and directly pitchable to furniture brands and real estate.

Portfolio Presentation Tips

For every project: (1) Record a 60–90 second Loom walkthrough. (2) Write 3 bullet points: the problem, your solution, and the tech used. (3) Add a live link if possible — even a free Vercel deployment. (4) Take high-quality screenshots in 1280x800 or 1920x1080. No stock photos on your portfolio page.

Section 4 — Website Improvement Plan

4.1 Current Website Audit Summary

Based on a review of kodek.in, the following gaps are the most critical to address:

- **No proof of work:** All three service cards use stock photos. Visitors cannot verify any past project.
- **Vague tagline:** "Crafting Virtual Excellence" does not identify a target client or a specific outcome.
- **No portfolio or work page:** There is no dedicated page showing what has actually been built.
- **Single weak testimonial:** One testimonial with no surname, no company, and awkward phrasing carries almost no trust weight.
- **Minimal navigation:** Only 3 nav links (About, Contact, T&C). No Services, Portfolio, or Blog pages.
- **No pricing signals:** Not even a "starting from" range. This creates hesitation for inbound leads.
- **AI Room Restyler lacks context:** It is promoted in the hero but without any explanation of the target user or use case.

4.2 Recommended Site Structure (Updated)

Add or create the following pages within the next two weeks:

Page	Purpose	Priority	Time to Build
Home (revamp)	New hero copy, services overview, 2 product highlights, social proof	Critical	2–3 days
Services	Detailed page for each service with use cases, deliverables, pricing range	Critical	1–2 days
Work / Portfolio	Screenshots, Loom videos, and case study summaries for each project	Critical	1–2 days
Case Studies (2–3)	Builders Copilot + AI Room Restyler detailed case studies	High	1 day each
About	Founder story, company mission, tech stack, location	High	Half day
Contact (revamp)	Add Calendly booking link, response time promise, WhatsApp button	High	Half day
Blog (optional)	1 post/week on AI + ArchViz topics for SEO — start in Week 3	Medium	Ongoing

4.3 Homepage Copy Suggestions

Hero Section

H1: "AI & Immersive Tech Built for Architects, Builders & Real Estate Professionals"
H2: "From intelligent AI assistants to photorealistic 3D visualizations — we build the tools that help you design faster, sell better, and wow your clients."
CTA 1 (Primary): "Book a Free 30-Min Demo" → links to Calendly
CTA 2 (Secondary): "See Our Work" → links to /portfolio

Services Section

Heading: "What We Build"
Show 4 core solution areas as cards with real icons (not stock photos):
1. AI Tools & Chatbots — Automate workflows, answer client questions 24/7, generate content at scale.
2. Architectural Visualization — Photorealistic 3D renders and interactive walkthroughs for your projects.
3. AR/VR Experiences — Let your clients step inside designs before a single brick is laid.
4. Custom Software — Purpose-built web and mobile applications for real estate, construction, and design.

Social Proof Section

Add a "Trusted by" logo strip (even 3–5 logos of companies you have worked with or built demos for). If you have no past clients yet, replace with a "Used by professionals in" strip showing industry names: Architects, Real Estate Developers, Interior Designers, Construction Companies.

4.4 Case Study Format

Every case study should follow this 5-part structure:

1. **The Client:** Who is this for? What industry, what size, what stage?
2. **The Problem:** What pain were they experiencing before this product?
3. **The Solution:** What did Kodek build? What technologies were used? Be specific.
4. **The Result:** What changed? Even qualitative results count: "Reduces property presentation time by 60%" or "Clients can visualize 5 design options in under 10 minutes."
5. **The Tech Stack:** Always list the stack. This builds technical credibility with developer clients on Upwork.

Section 5 — Upwork Profile Optimization

Upwork is your fastest path to the first paying client. Here is a complete, copy-paste-ready profile and proposal system.

5.1 Profile Title

AI & Simulation Engineer | Chatbots · AR/VR · 3D Visualization · Software Simulations · Games

5.2 Profile Overview (Copy-Paste Ready)

I build AI software, immersive simulations, AR/VR experiences, and interactive games. I run Kodek (Kodekaromas Technologies) — an AI and technology research company — and I take on freelance projects that align with our five core technology areas. What I build: — AI agents, chatbots, and LLM-powered tools (OpenAI, LangChain, RAG, custom pipelines) — Software simulations: physics, process, training, and digital twin prototypes — AR/VR experiences for web and mobile (WebXR, A-Frame, model-viewer, WebGL) — Game prototypes: serious games, browser games, Unity/Unreal builds, AI-driven NPCs — ArchViz and PropTech: 3D walkthroughs, AI room design, floor plan tools, construction AILive products I've shipped: Builders Copilot (AI assistant for construction professionals) and AI Room Restyler (AI-powered interior design tool). Both are production deployments — not prototypes. I work fast, communicate in plain English, and deliver with clean code and real documentation. Every project gets a live demo link before final delivery. Send me your brief — I'll reply with scope, timeline, and fixed price within 24 hours.

5.3 Skills to Add (Upwork Tags)

- OpenAI API / GPT-4 Integration
- LangChain / AI Agents / RAG
- Software Simulation Development
- Three.js / WebGL / 3D Visualization
- Augmented Reality (WebAR / WebXR)
- Game Development (Unity / Browser)
- React.js / Next.js
- Python / FastAPI
- Architectural Visualization
- Node.js / Express

5.4 Upwork Categories to Target

- **Primary:** AI Development — highest volume and budgets globally right now
- **Strong secondary:** AR/VR Development — less competition, strong budgets
- **Strong secondary:** Game Development — serious games and simulation are growing fast
- **Also:** 3D Design / Architectural Visualization
- **Also:** Web Development → Full Stack (for broader reach)

5.5 Project Catalog (Fixed-Price Offerings)

Catalog Item	Delivery	Price Range
AI Chatbot for Your Website (OpenAI + React)	7 days	\$300–\$800
AI Room Visualizer / Interior Design Tool	14 days	\$500–\$1,500
3D Floor Plan Viewer (WebGL / Three.js)	10 days	\$400–\$1,000
AR Product Experience (WebAR)	14 days	\$700–\$2,000
Custom AI Web App MVP (Full Stack)	21 days	\$800–\$2,500
Real Estate Virtual Tour (360 / WebVR)	7 days	\$300–\$700

5.6 Sample Proposals (Copy-Adapt-Send)

Proposal A — AI Chatbot / Assistant

Hi [Name], I noticed you're looking for an AI chatbot developer. This is exactly what I specialize in — I've built a live AI assistant called Builders Copilot using OpenAI + LangChain that works similarly to what you're describing. For your project, I'd approach it like this: [1–2 sentences specific to their job post]. I can deliver a working version in 7 days. Here's my live demo: [link to Builders Copilot or relevant project]. Fixed price: \$[X]. Happy to jump on a quick 15-minute call to confirm scope before you commit. Soumya | Kodek

Proposal B — Architectural Visualization / 3D

Hi [Name], I specialize in real-time 3D architectural visualization for the web — interactive walkthroughs, floor plan viewers, and photorealistic renders using Three.js and React Three Fiber. I've reviewed your project brief and I can replicate the style you're looking for. Here's a relevant example from my portfolio: [link]. Timeline: [X] days. Fixed price: \$[Y]. I'll share a live preview before the final delivery so you can request any adjustments. Would you like to see a few more portfolio examples before we start? Soumya | Kodek

Proposal C — AR/VR Experience

Hi [Name], AR/VR for web (WebAR, WebXR, A-Frame) is one of my core specialties. I've built interactive AR experiences that work directly in the browser — no app download needed, compatible with iOS and Android. For your project, the cleanest approach would be: [1 sentence on technical approach]. Delivery in [X] days, fully responsive across mobile and desktop. Live demo: [link to AR project]. Let me know if you'd like a quick scope call — I can usually turn around a proposal in a few hours. Soumya | Kodek

Proposal D — Real Estate / PropTech Tool

Hi [Name], Real estate technology is my primary niche — I've built AI tools for builders and architects, including an AI room redesign tool and an intelligent assistant for construction professionals (both live, I'll share links). Your project fits squarely in what I do. Here's my read on the scope: [brief interpretation]. I'd recommend [short technical recommendation] as the approach — it'll be faster to build and more maintainable long-term. Fixed price: \$[X] | Timeline: [Y] days | Tech stack: [React + Node + OpenAI or Three.js — whatever applies] Ready to start immediately upon agreement. Soumya | Kodek

Proposal E — Custom Software / MVP

Hi [Name], I build MVPs fast — typically 2–4 weeks for a full-stack web app with auth, database, and AI features. I've built production AI tools from scratch and know the fastest path from idea to live product. For your MVP, I'd break it into: [Phase 1: core feature] → [Phase 2: user auth + dashboard] → [Phase 3: deployment + testing]. You get a live link at every phase so you're never in the dark. Fixed price: \$[X] for the full scope above. Happy to start with Phase 1 only if you'd prefer to validate first. Portfolio: [link] | Available now | Response within 4 hours. Soumya | Kodek

5.7 Upwork Pricing Strategy

- **First 0–2 reviews:** Price 25% below your target. Win at all costs. Reviews are worth more than margins at this stage.
- **Reviews 3–5:** Price at market rate. Your profile now has social proof.
- **After 5 reviews:** Raise prices 15–20%. Top Rated Badge will come, enabling higher visibility.
- **Never go below:** \$200 for any project. Below that, clients expect unlimited revisions and become difficult.
- **Connect strategy:** Send 10 proposals per week. Target jobs posted in the last 24 hours. Personalize every proposal — never copy-paste without editing lines 2 and 3.

Section 6 — Lean Startup Plan

6.1 Monthly Operating Cost Budget

You can run Kodek professionally for under ₹5,000 / \$60 per month. Here is the recommended tool stack:

Category	Recommended Tool	Cost/Month	Purpose
Domain + Hosting	Already on WordPress (kodek.in)	₹0	Existing asset
Email	Gmail / Zoho Mail free	₹0	Professional outreach
CRM / Task Tracking	Notion free tier	₹0	Client pipeline, project tracking
Design	Figma free tier	₹0	UI mockups, pitch decks
AI APIs	OpenAI API (pay-per-use)	₹500–₹2,000	Products + client projects
Image Gen AI	Replicate.com (pay-per-use)	₹200–₹800	Room Restyler, portfolio
Code Hosting	GitHub free	₹0	All project repos
Demo Hosting	Vercel free tier	₹0	Portfolio project deployments
Video Demos	Loom free (5 videos)	₹0	Portfolio walkthroughs
Scheduling	Calendly free tier	₹0	Discovery call bookings
Proposals	Google Docs / Notion	₹0	Client proposals
Upwork	Free to join	20% commission	Client acquisition
LinkedIn	Free personal account	₹0	Networking + outreach

Total Monthly Burn

Estimated: ₹700–₹2,800/month (\$10–\$35) depending on API usage. This is the lowest possible operating cost for a credible, professional AI services studio.

6.2 Services First vs. Products First

For a solo founder with no outside funding, the answer is clear: services first.

- **Services generate immediate cash:** A single ₹50,000 project pays for 6 months of operating costs and 2 months of your time.

- **Services validate product ideas:** Every client project teaches you what the market actually wants — not what you assumed. Builders Copilot likely came from a real conversation about what builders struggle with.
- **Products become marketing assets:** Keep AI Room Restyler and Builders Copilot live as free demos. They will convert more clients than any brochure.
- **Products as revenue — later:** Once you have 3–5 steady service clients (3–6 months), start monetizing the products. AI Room Restyler at ₹499/month for interior designers could become a real SaaS business.

6.3 Validation Before Building

Before building any new product or service, validate it with a simple checklist:

1. **Is anyone already paying for this?** Search Upwork for the category. If there are 50+ active job posts, the demand is real.
2. **Can you demo it in 60 seconds?** If you can't show the value in one minute, the pitch will fail in a sales call.
3. **Can you build an MVP in one week?** If it takes longer than 7 days to build a testable version, simplify the scope first.
4. **Do you know 3 specific people who would pay for this?** Name them. If you can't, it's too abstract.

Section 7 — Revenue Plan (30–60 Days)

7.1 Revenue Streams by Channel

Focus your energy on the top two channels first. Add others as you have bandwidth.

Channel	Expected in 30 Days	Expected in 60 Days	Effort Level
Upwork (global freelancing)	₹20K–₹60K (1–2 projects)	₹80K–₹1.5L (3–5 projects)	High — 2 hrs/day
LinkedIn Direct Outreach (India)	₹0–₹50K (discovery calls)	₹50K–₹1.5L (1–2 clients)	Medium — 1 hr/day
Website Inbound (SEO + portfolio)	₹0 (takes time to build)	₹0–₹50K (1 lead)	Low — setup once
WhatsApp / referral network	₹0–₹50K (depends on network)	₹25K–₹75K	Low — minimal effort
Direct pitch to architects/agents	₹0–₹75K (1 demo → project)	₹75K–₹2L	Medium — 1 hr/day
Product SaaS (AI Room Restyler)	₹0 (build first)	₹2K–₹10K/month	Low — once set up

7.2 Pricing Models

- **Fixed-price projects (recommended for first clients):** Scope is locked, payment is clear, trust is easier to build. Use for Upwork and first-time clients.
- **Monthly retainers (₹20,000–₹50,000/month):** Offer after project completion. Include: feature additions, bug fixes, AI model updates, and 4 hrs/month consulting. This is your best long-term income.
- **SaaS subscriptions (₹499–₹2,999/month):** Start with AI Room Restyler. Offer free tier + paid tier with more renders/month. Keep it simple.
- **Consulting / strategy calls (₹3,000–₹5,000/hr):** Offer "AI adoption strategy" calls for companies considering AI. Easy to sell, no build time required.
- **White-label products:** License Builders Copilot or AI Room Restyler to companies who want it branded as their own. Charge a one-time licensing fee (₹1–3L) + optional monthly hosting.

7.3 LinkedIn Outreach Strategy

LinkedIn is your most underused asset. Here is a simple, repeatable outreach system for Week 3 onwards:

1. **Optimize your profile:** Title: "Founder, Kodek | Building AI Tools for Architects & Real Estate Professionals." Add your two products in the Featured section.
2. **Post 3x/week:** Short posts (3–5 lines) about AI + real estate/architecture topics. Show your work — screenshots, before/after, demos. Do not post generic AI news.
3. **Connect 10/day:** Search: Architect + India, Real Estate Developer + India, Interior Designer + India. Connect with a 1-line personalized note.

4. **Send 5 DMs/day to warm connections:** "I noticed you work in [industry]. I've been building AI tools for [exact use case] — would love to show you a quick 2-min demo. No pitch, just sharing the work."
5. **Follow up once:** If no response in 5 days, send one follow-up. Then stop. Never send more than 2 messages total.

Section 8 — 30-Day Execution Roadmap

This is your week-by-week action plan. Each task is concrete, time-bounded, and executable by a solo founder. Priority order: Client acquisition first, polish second.

WEEK 1 (May 1–7) — Foundation

#	Task	Time Needed	Goal
1	Rewrite homepage hero copy (use copy from Section 4.3)	2–3 hrs	Clearer positioning
2	Add Services page with 4 core services and starting prices	3–4 hrs	Visitor can understand and contact
3	Create Portfolio page — add screenshots of Builders Copilot and AI Room Restyler + Loom demo links	2–3 hrs	Proof of work live
4	Set up Upwork profile using Section 5 copy word-for-word	2–3 hrs	Profile ready to pitch
5	Record 90-second Loom demo of Builders Copilot and AI Room Restyler	1–2 hrs	Portfolio assets created
6	Write Builders Copilot case study using the 5-part format from Section 4.4	2–3 hrs	First case study live
7	Set up Calendly free account and add booking link to website contact page	30 min	Leads can book calls

WEEK 2 (May 8–14) — Portfolio & First Proposals

#	Task	Time Needed	Goal
1	Build Portfolio Project #1: Real Estate AI Chatbot Demo (see Section 3.2)	2–3 days	Strongest Upwork asset
2	Build Portfolio Project #2: AI Property Listing Generator	1–2 days	Second portfolio piece
3	Send first 10 Upwork proposals (use templates from Section 5.6)	2–3 hrs	First responses and conversations
4	Post 3 times on LinkedIn: one post per project demo with screenshot + 3 lines explaining what it does	1 hr/post	Visibility + credibility
5	Add About page: your story, the mission, your tech stack, a professional photo	2–3 hrs	Humanize the brand
6	Write AI Room Restyler case study	2–3 hrs	Second case study live
7	Identify 20 potential LinkedIn connections (architects, developers, interior designers in India)	1 hr	Outreach pipeline ready

WEEK 3 (May 15–21) — Outreach & Conversion

#	Task	Time Needed	Goal
1	Follow up on all Upwork proposals sent in Week 2	30 min/day	Get first responses
2	Send 10 more Upwork proposals — focus on active jobs posted in last 48 hrs	2–3 hrs	Expand pipeline
3	Begin LinkedIn outreach: connect + message 5 architects/developers per day	45 min/day	Build India client pipeline
4	Build Portfolio Project #3: 3D Floor Plan Visualizer (Three.js)	3–4 days	High-value ArchViz demo
5	Write first blog post: 'How AI Is Changing Architectural Visualization in 2026' (500–800 words)	3–4 hrs	SEO + LinkedIn content
6	If any Upwork lead shows interest: jump on a call, send proposal within 2 hrs, close	Reactive	First paying project
7	Add pricing / Packages section to website using Section 2.2	2-3 hrs	Remove price hesitation

WEEK 4 (May 22-30) -- Close, Deliver & Systematize

#	Task	Time Needed	Goal
1	Close first project -- accept 50% payment upfront before starting any work	Reactive	First Rs. earned
2	Deliver first project: work fast, communicate daily, under-promise and over-deliver	Project time	5-star review
3	Build Portfolio Project #4: AR Furniture Placer (WebAR with A-Frame)	3-4 days	Impress international clients
4	Set up a Notion CRM: Lead / Contacted / Proposal Sent / Negotiating / Closed / Delivered	1-2 hrs	Stay organized as pipeline grows
5	Ask first client for a written testimonial (name, company, specific results)	15 min	Replace the weak anonymous testimonial
6	Review which Upwork proposal style got the most responses -- double down on that format	1 hr	Optimize for Week 5+
7	Plan Month 2: 2 more portfolio projects, slightly raised rates, 2 more blog posts	1-2 hrs	Momentum into Month 2

8.1 Daily Rhythm (Sustainable Solo Founder Schedule)

Time Block	Activity
Morning (1-2 hrs)	Upwork proposals + LinkedIn outreach. Do this FIRST before any building.
Midday (3-5 hrs)	Build: portfolio projects, client work, product improvements.
Afternoon (1-2 hrs)	Website / content: case study section, blog paragraph, or portfolio update.
Evening (30 min)	Reply to messages, follow-ups, update Notion CRM. Stop work. Protect your energy.

Quick Reference -- Top 10 Priority Actions

If you only read one page of this document, read this. These are the 10 actions most likely to get you a paying client fastest.

Priority	Action	When
1	Rewrite homepage hero with new copy from Section 4.3	Day 1
2	Create Upwork profile using the copy from Section 5.2	Day 1-2
3	Record Loom demos of Builders Copilot + AI Room Restyler	Day 2
4	Build Real Estate AI Chatbot Demo for portfolio	Day 3-5
5	Send first 10 Upwork proposals (personalized, not copy-paste)	Day 5-7
6	Add Portfolio page to kodek.in with real screenshots and demo links	Day 3-4
7	Set up Calendly and add booking link to website + every email signature	Day 2
8	Write Builders Copilot case study using the 5-part format from Section 4.4	Day 4-5
9	Start LinkedIn outreach: 5 connects + 3 DMs per day to architects/developers/studios	Day 7+
10	Post on LinkedIn 3x/week with demo screenshots and short captions	Day 7+

Final Thought

You already have something most AI agencies don't: two live, working products that prove you can build intelligent, production-quality software. Builders Copilot and AI Room Restyler are not demos -- they are real proof. And now, with the broader positioning of Kodek as an AI and technology research company, every simulation project, game prototype, AR experience, or AI tool you build becomes part of a coherent body of work -- not a disconnected portfolio of random freelance gigs. Your job in the next 30 days is not to build more. It is to make sure the right people know what you have already built -- and understand the full scope of what Kodek can do.
